Uganda ADSS Optical Cable ADSS

Overview

All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements. Fittings used with ADSS cable may be tension type, used at dead-ends where the cable terminates or changes direction, or may be suspension type, only holding the weight of a span with tension transmitted through it. Cables must be designed for the worst-case combinations of temperature, ice load, and wind.
