What are the uses of fiber optic pigtailed in computer rooms

Overview

A pigtail is a piece of fiber optics with a pre-mounted connector on one side. When compared to field-installed rapid termination or epoxy and polish connections, pre-terminated optical pigtails with connectors save time while providing improved performance and reliability. The connector end is polished and tested under factory conditions, ensuring low insertion loss and high return loss. The connector end plugs into devices like transceivers or patch panels, while the bare end is typically fusion spliced to a fiber optic cable.
