Overview

The lighting control, "board" or "desk" is the a key part of any stage lighting set up and it is using the lighting desk that an operator is able to control the equipment. They are used throughout the entertainment industry and are normally placed at the front of house (FOH). It acts as a bridge between your physical lighting fixtures and the smart systems that manage them. This board happens to be an ETC Express 250, which I'll use to demonstrate what many lightboards are capable of: but I'm more interested in focusing on what you can do, and some of the terminology used lightboards.
