What type of conduit should be used with a 24-core optical fiber cable

Overview

It's important to consider not only the rigidity of the jacket but also the breakout point of the assembly, where the strands exit the jacket and are encased in. When it comes to choosing the right conduit for your fiber optic installation, several factors need to be considered: **Why Do You Need Conduit When Installing Outdoor Cabling?**

Conduit is essential for outdoor network cable installations because it provides crucial protection for your cables. The conduit ensures the safe and reliable functioning of fiber optic networks, reducing the risk of signal degradation, physical damage, and costly downtime. **PVC Conduit: What Makes It Suitable for Fiber Optics?**

PVC (Polyvinyl Chloride) conduit is a popular choice for both. It can help isolate fiber to prevent damage from other cables or trades working in those.
