Where is the best place to install a router for fiber optic cable

Overview

That's why the best practice is to place your router a few feet off the ground, such as on a cabinet, desk or wall mount. The location of your router may wreak havoc on your Wi-Fi in one of two ways: The signal could be too weak due to distance or there could be something interfering with the signal even when. If a technician with your internet service provider (ISP) is going to install the router and get your internet up and running, they can advise you on the ideal router location. In the meantime, or if you're planning to do the installation yourself, read on for tips on where to place the router. Moving your router even just a few feet might save you from endless hair-pulling connection woes and allow you to get the most out of your internet.
