# **Where to connect the MPO fiber optic patch cord**

## Overview

---

Intra-rack connections: Server NIC to top-of-rack (ToR) switch via LC duplex or MPO breakout  
Inter-rack connections: Horizontal patching between row distribution frames and spine switches  
Cross-connect frames: Structured patching in main distribution areas (MDA) for colocation. An MPO patch cord is a fiber optic cable terminated on either end with MPO connectors. The defining characteristic of the MPO connector, specified by the IEC 61754-7 standard, is its ability to house multiple fibers within a single rectangular ferrule. In this guide, we'll walk you through every step, from planning to testing, so you can install MPO/MTP cables with confidence and efficiency—and maybe even enjoy the process! MPO. The precision alignment of two fiber ends via a core insert and mechanical structure ensures stable and low-loss signal transmission. Whether you're cabling a new AI training cluster, upgrading a campus backbone, or just replacing aging patch cords in a colocation cabinet, this guide walks you through every decision point with actionable criteria.
