The laser diode chip removed and placed on the eye of a needle for scale. A laser diode with the case cut away. The laser diode chip is the small black chip at the

### Turn-on delay time for Laser diode

The turn on delay or soft-start is by design and depends on the laser current controller. As far as I know, it has nothing to do with the diode laser itself. It is not so much as a delay as it is a slow ramping up

### Laser diode

In silicon diodes, the energy is released during recombination. However, this release of energy is not in the form of light. In gallium arsenide diodes, the release of energy is in the form of light or photons.
